Summary

Full Stack Engineer with experience in designing and deploying scalable enterprise systems across domains including enterprise inspections, database administration, property rentals, and food delivery platforms. Skilled in **React, Node.js, Angular, Java, Spring Boot, .NET, PostgreSQL, MySQL, Oracle Database**, and microservices architecture. Adept at implementing secure authentication, workflow automation, and database optimization for high availability, while delivering reliable and impactful software solutions. Enthusiastic learner with strong problem-solving abilities and a focus on enhancing operational efficiency and user experience.

Education

Dr. Akhilesh Das Gupta Institute of Technology and Management, Delhi

2019-2023

B.Tech in Information Technology

8.6 CGPA

Technical Skills

Languages: Java, HTML/CSS, JavaScript, SQL, C#.

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, WordPress, Prisma, .NET Framework,

Database Management: Oracle Database, MySQL, PostgreSQL.

Familiar with Tools: Git, GitHub, MongoDB Atlas, Postman, VS Code, Linux.

Experience

Full-Stack Engineer

Feb 2025 – Present

SISL Infotech Pvt. Ltd. - *Angular, Node.js, Express, .NET (ASP.NET), MySQL, Python, PostgreSQL, O365 SMTP*

- Audited multiple enterprise sites and drove 100+ findings to closure by mapping assets/IPs and building lightweight dashboards using Angular, Node.js, MySQL, and REST APIs to track issues from intake through re-test and reporting.
- Delivered an end-to-end pre-delivery inspection workflow covering request lifecycle, agency/QA views, verify/reject trails, bulk master uploads, and automatic email reminders to accelerate approvals.
- Shipped a submission and approval process for **Contract Performance Guarantee(CPG)** with checklists, gated statuses, approver routing, SLA timers, role-based views, and audit logs; included a role-based **Bill Tracking System (BTS)** for invoices (cluster/departments/state/individual) with counts by status—acknowledged, accepted, pending acknowledgement, and total.
- Built a reliable internal mail service for PDI/CPG notifications with retries, health checks, and standardized logs so teams never miss critical updates.
- Improved day-to-day ops by reducing manual follow-ups, tightening SLA adherence, and giving stakeholders clear, drill-down visibility across inspections, submissions, and invoices.

Database Administrator

Feb 2024 – Feb 2025

iONE IT Solutions Pvt. Ltd. - *MsSQL, Linux, MySQL, SQLDeveloper, Oracle Database*

- Set up an Oracle Linux server, installed and configured Oracle Database, optimizing for performance and reliability.
- Imported client data using impdp, managed backups, and ensured data integrity throughout the process.
- Created and managed tablespaces, optimizing storage and performance to meet database requirements.
- Performed regular maintenance, including patching, backup, and recovery using RMAN, ensuring high availability.
- Configured and managed Oracle Data Guard for disaster recovery, enhancing data protection and availability.
- Utilized Oracle Enterprise Manager (OEM) for monitoring, managing, and optimizing Oracle Database environments.

Software Engineer , Backend Development

July 2023 – Dec 2024

AAL Infotech Pvt. Ltd. - *Java, SpringBoot, Node.js, React.js, .NET, MySQL, Python, REST API*

- Developed scalable backend services using Node.js and Spring Boot with MySQL and MongoDB databases.
- Built high-performance RESTful APIs using Express.js and Spring Boot, improving efficiency.
- Implemented secure authentication using JWT in Node.js and Spring Security with JWT in Java.
- Integrated Multer for seamless image uploading in Express.js, ensuring smooth file handling via Postman testing.
- Utilized Moment.js for precise date-time manipulation, resolving deprecated format issues and enhancing functionality.
- Optimized data retrieval performance using MongoDB Aggregation queries for efficient database queries.

Internships

Web Developer Intern, Full Stack Development

October 2021 – April 2022

PepCoding - *Express.js*, *HTML*, *CSS*, *.NET (ASP.NET)*

- Rectified critical bugs across backend and frontend, boosting performance and user satisfaction by minimizing error reports.
- Collaborated with senior developers to build websites using HTML, CSS, and Express.js, increasing development efficiency by 25% and significantly enhancing website functionality and user experience.

Web Developer Intern, Full Stack Development

Feb 2021 – September 2021

Kuviba - *WordPress*, *PHP*, *CSS*, *HTML*, *.NET (ASP.NET)*

- Transformed WordPress pages with CSS, boosting user engagement by 20% with a cohesive design.
- Used Excel for bulk page creation, cutting management time by 40%, and implemented custom PHP for a 15% increase in user interactions.

Projects

eBegin – Enterprise Management Platform — .NET Core 3.1, Angular 12, MySQL, MSSQL, REST API, JWT, IIS Hosting

- Developed a comprehensive enterprise-grade platform integrating **SCM**, **HCM**, **CCMS**, and Finance modules to streamline organizational operations.
- Implemented secure **role-based authentication and authorization** using **JWT** and **Azure AD**, ensuring controlled access and enhanced data security.
- Designed and optimized complex **stored procedures** across **MySQL** and **MSSQL**, enabling high-performance reporting and scalable dashboard analytics.
- Built interactive **Angular dashboards** with **drill-downs**, **graphs**, and **filters** to provide management insights.
- Automated **email notifications** and **approval workflows** using **SMTP** and **Office 365**, significantly reducing manual intervention and turnaround time.

FoodZoned

- Utilized JWT (JSON Web Token) for authentication and authorization, leading to a 30% reduction in unauthorized access attempts and a more secure user environment.
- Successfully integrated Razorpay payment gateway, enhancing the platform's payment capabilities.
- Implemented NodeMailer for email communication, resulting in a 40% improvement in communication reliability and user engagement.
- Integrated Multer for image uploading, reducing errors by 50% and improving user experience; tested with Postman, reducing potential errors by 20%.
- Utilized Node.js for backend development, Express for server creation, and MaterialUI for image handling, leading to a 20% improvement in system performance and user satisfaction.
